Summary

I'm interested in Computer Science and Computer Engineering,the convergence of hardware components and software architecture, equally I have a keen interest in the financial service industry in its broadest form , specifically financial inclusion using latest technology like block-chain,Artificial Intelligence ,so the interest in Financial Technology arise from one's passion for Data Science since Initially at during my first in 2015,I was study Bachelor of Business Science(specializing in Analytics) I was fascinated with idea of using data to make informed and insightful decision both for businesses and individuals alike and how we can use the data generated through the technological platform and/or system service that that the end-users interact , however that is not an indication of my willingness to settle and/or work only in the said industry nor is it a limitation for my areas of interest.

Agile practitioner ,who lives and practice the ethos espoused in the original "Agile manifesto",social interaction is encouraged over tools and processes that are inherent in dynamic systems.
